

THE METAL CONNECTION

How jewellery and dental work cause pain, injury and illness

Do your patients have illnesses or injuries that just won't heal? Do they suffer from unexplained aches, pains, stiffness, or fatigue that won't go away, no matter what you try?

The culprit may be right under their nose or hanging around their neck.

In this one-day, hands-on seminar, you will learn how necklaces, rings, watches, piercings and dental work commonly cause interference to the sensory nervous system.

By disturbing afferent sensory input, much of the metal work we take for granted may well be "getting on our nerves" - quite literally! When sensory input is disturbed, motor output can be severely disrupted, leaving us vulnerable to acute, chronic and recurrent injury.

The Metal Connection is a one-day seminar that will show you exactly how to find out whether metal is harming your patients and what you can do about it.

It offers simple strategies that can quickly resolve even long-term health problems.

You will learn:

- A four-step process to quickly and reliably determine whether metal is part of the patient's problem.
- The 15 most common causes of proprioceptive stress—from earrings to eyeglasses.
- How metal affects the most vital proprioceptive reflexes.
- Safe alternatives to metal.
- How the effects of amalgam fillings and dental crowns can show up anywhere from your neck to your knees.
- Why some people are still ill in spite of good exercise, nutrition and chiropractic care.

The Metal Connection is a **great seminar** for chiropractors who want to rapidly diagnose and treat the hidden causes of difficult, chronic or recurrent conditions.

All seminars are held on Sundays so no time lost from practice.

For latest dates go to www.proprioception.co.uk/dates.html

Simon King Seminars, 42 Lower Kings Road, Berkhamsted, Herts HP4 2AA

Dr Simon King, B.App.Sc. (Chiro), DIBAK

has lectured at Chiropractic Colleges in the UK and Australia. He is a qualified instructor for the International College of Applied Kinesiology and regularly teaches the principles of Proprioception.

"Thank you for the great day. Definitely the best seminar I have ever been to. The workshopping and seeing people being treated there and then was excellent. I look forward to the next seminar."
Dr Matt Avery – Chiropractor

"Simon has changed the way I practice for the better. I have renewed energy and enthusiasm."
Dr V Stekic – Chiropractor

"This course transformed my way of practising more than anything I have attended since leaving college. It works and it makes sense."
Dr Ulrick Sandstrom, Chiropractor

"Proprioceptive Medicine opens diagnostic awareness for many common problems seen in G.P. Surgeries. I recommend Simon's course for all medical practitioners. Their work practices will improve and their patient's health will benefit."
Dr Michael O'Beirne, M.B., M.R.C.G.P., General Practitioner, Galway

"This is the key to solving those clinical dilemmas in a way that impresses your patients and gets rid of the frustration of not being able to find the answer"
Dr Tom Greenway, Chiropractor
